

Interactive comment on “Online modelling of water distribution systems: a UK case study” by J. Machell et al.

G. I. M. Worm (Editor)

g.i.m.worm@tudelft.nl

Received and published: 4 March 2010

Referees have given positive judgements on the paper. Authors have discussed the comments given by the referees. Authors, please process the suggestions of the referees and submit the revised manuscript to DWES. If the comments of the referees have been taken into account, the paper can be published.

Although DWES aims on scientist and practitioners, the suggested references (referee 3) should be taken into account. Referee 3 asks about other peaks and drops than discussed (page C108). Limit the data in the figure to the relevant part. Discuss all visible peaks and drops.
