Thank you to the Authors of this manuscript for the interesting study.

Few minor comments: I would invite the authors to expend their introduction, and especially provide more information about the outcomes of the previous studies using BDOC in similar applications. What are the pros/cons of the method? Does it present complementarity to other methods? Section 2.1 is not really needed. Please avoid the use of 'the' in table/figure captions, and "will" in the text (general rule with few exceptions)
