

Interactive comment on “Removal and transformation of pharmaceuticals in wastewater treatment plants and constructed wetlands” by E. Lee et al.

Anonymous Referee #1

Received and published: 10 June 2013

The paper presents valuable results that may help in the understanding of transformation of micropollutants in wastewater treatment plants.

The present state of the paper is acceptable to be published with minor corrections. Specifically, improvements in the visibility of Fig. 1 and 2. Additionally, in Section 3.3, the authors should be able to explain why it was difficult to find relationships between transformation of parent and metabolites with corresponding electron density.
