

Interactive comment on “Investigation of the relationship between drinking water quality and landform classes using fuzzy AHP (case study: south of Firozabad, east of Fars province, Iran)” by Marzieh Mokarram and Dinesh Sathyamoorthy

Anonymous Referee #2

Received and published: 28 August 2016

1. The authors argue that organic matter concentration is low. As a result, it is ignored in this study. However, OC is typically low in most of source water and it is still a very important factor to consider for drinking water. Low OC can greatly influence the safety of drinking water. The author should change "drinking water quality" to "inorganic components in drinking water" in the title and in the manuscript. 2. The grammatical errors should be thoroughly checked and corrected.
