

Interactive comment on “Limitations of Demand- and Pressure-Driven Modeling for Large Deficient Networks” by Mathias Braun et al.

Anonymous Referee #1

Received and published: 19 May 2017

The paper is clear and well written. I like the fact that it gives a framework of the state of the art of WDN modelling. However, I think that it misses some important reference such as: Todini E., Rossman LA "Unified Framework for Deriving Simultaneous Equation Algorithms for Water Distribution Networks." JOURNAL OF HYDRAULIC ENGINEERING-ASCE, Volume: 139, Issue: 5, Pages: 511-526.

Furthermore, how does the Authors' formulation relate to Todini and Pilati's GGA? And to other algorithms currently used in simulation software!
