Dear valued Dr

We are thankful for your compromising in the introduction of your valuable comments We totally agree with all the points been raised and we will perform all the responses needed accordingly the final version of the article. Regarding the BET test, we have sent our samples to one of labs which has the apparatus to conduct the test (which we expect that the result will be out after one week) and we believe that this test will answer most of the comment and questions related specially regarding the surface area, porosity and particles distribution. For the microwave power used, was 800 Watt

C1

We will include all these details in the final version

Thanks again
