Interactive comment on “Water Reclamation for industrial use in sub-Saharan Africa, a Critical Review” by Noor J. Gulamussen et al.

Anonymous Referee #2

Received and published: 1 April 2019

The manuscript summarized the global trends on water reclamation on industrial use, and to derive lessons for implementation of water reclamation projects in Sub-Saharan Africa. The authors believed technical challenges, changing legislation, introducing new policies, adoption of alternative financial structures and subsidies will support water reclamation. The paper is well organized and written, however some of the citation need to be updated. This paper can be published.

Page 3 line 15, Table 1 summarized the regional variation in water reclamation, however the data for Asia should be updated as this area maybe similar to Africa to some extent.
