

Interactive comment on “Numerical Analysis of Circular Settling Tank” by Elahe Chero et al.

Anonymous Referee #2

Received and published: 26 April 2019

Thank you for the opportunity to review this article. The purpose, as I understand it, was to numerical analysis related to geometrical aspects of a settling tank. The study has practical implications for Civil and environmental engineering. It can be used as a usable for the wastewater treatment plan. Below, I provide specific comments and edits. These are mostly minor edits and clarifying points.

- The introduction should be shortening
- Please determine the distribution of the data (Normal etc.)
- Please use the latest references
- The manuscript needs serious English editing
- Increase the quality of the images
