

Interactive comment on “Numerical Analysis of Circular Settling Tank” by Elahe Chero et al.

Anonymous Referee #4

Received and published: 2 May 2019

The paper is about numerical analysis of the settling tank. Everything is well explained but there are few issues that I like to mention: - English needs to be improved - References should be updated - Some figures do not have a good quality, fix it - Check your units there is confusion between metric and English system in some parts
